                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       7e-11
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   2e-12
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            1e-10
```

The invention relates to human nucleic acids (AAI57798-AAI61369) and CC the encoded polypeptides (AAM38642-AAM42213) with nootropic, immunosuppressant and cytostatic activity. The polynucleotides are useful CC in gene therapy. A composition containing a polypeptide or polynucleotide of the invention may be used to treat diseases of the peripheral nervous CC system, such as peripheral nervous injuries, peripheral neuropathy and Clocalised neuropathies and central nervous system diseases, such as C localised neuropathies and central nervous system diseases, such as C lateral sclerosis, and Shy-Drager Syndrome. Other uses include the C lateral sclerosis, and Shy-Drager Syndrome. Other uses include the C utilisation of the activities such as: Immune system suppression, C and thrombolytic activity, chemotactic/chemokinetic activity, haemostatic and thrapy, drug screening, assays for receptor activity, arthritis and inflammation, leukaemias and C C.N.S disorders.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          577 LeuCysGlnProLeuLeuAspAlaValLeuAlaAsnIleArgSerProVa 593
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Human; nootropic; immunosuppressant; cytostatic; gene therapy; cancer; peripheral nervous system; neuropathy; central nervous system; CNS; plathelmer's; parkinson's disease; Huntington's disease; haemostatic; amyotrophic lateral sclerosis; Shy-Drager Syndrome; chemotactic;
                                                                                                      system, such as peripheral nervous injuries, peripheral neuropathy and localised neuropathies and central nervous system diseases, such as Alzheimer's, Parkinson's disease, Huntington's disease, ampotrophic lateral sclerosis, and Shy-Drager Syndrome. Other uses include the utilisation of the activities such as: Immune system suppression, activinyinhibin activity, chemotactic/chemokinetic activity, haemostatic and thrombolytic activity, cancer diagnosis and therapy, drug screening, assays for receptor activity, arthritis and inflammation, leukaemias and
                                                                                                                                                                                                                                                                              The invention relates to human nucleic acids (AAI57798-AAI61369) and the encoded polypeptides (AAM38642-AAM42213) with nootropic, immunosuppressant and cytostatic activity. The polypucleotides are useful in gene therapy. A composition containing a polypeptide or polynucleotide of the invention may be used to treat diseases of the peripheral nervous
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Human polypeptide SEQ ID NO 7016.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             26-DEC-2000; 2000WO-US34263

                                                                               Percent Similarity:
                                                                                                                                                                                                                                                              The present invention relates to human single exon nucleic acid probes (SENP: see AAI10068-AAI28459). The present sequence is a peptide encoded by one such probe. The SENPs are derived from human HeLa cells. The SENPs can be used to produce a single exon microarray, which can be used for measuring human gene expression in a sample derived from human cervical epithelial cells. By measuring gene expression, the probes are therefore useful in grading and/or staging of diseases of the cervix, notably
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       1697 TGTCTTCAACCATTCCCTGTACCGCACATTCGTTCCAGCCATG 1739

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      526 GCAGTAGTGCAGCAGCAGCAGCTCCAGCAGCAGCAGCAGCAGCAGCA
                                                                                                   The present invention relates to single exon nucleic acid probes (SENP: see AAI31315-AAI57546). The present sequence is a peptide encoded by one such probe. The probes are useful for producing a microarray for predicting, measuring and displaying gene expression in samples derived from human placenta. The probes are useful for antenatal diagnosis of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   genetic disorder

```

The present invention relates to novel single exon nucleic acid probes (see AAI00010-AAI10067). The present sequence is a peptide encoded by one such probe. The probes are useful for measuring human gene expression in a human breast sample, where the probe hybridises at high stringency to a nucleic acid expressed in the human breast. The probes are useful for

```
CC encoded by the hphl oncogene that is implicated in neoplastic CC disorders. Also claimed are: (1) an hphl polypeptide consisting of CC at least 22 contiguous amino acids; (2) an hphl fusion protein; (3) CC antibodies which specifically bind to a hphl protein; (4) an expression construct for expressing all or a portion of hphl CC expression construct for expressing all or a portion of hphl CC identifying neoplastic tissue of a human, where over-expression of CC the hphl gene identifies the tissue as being neoplastia; (7) a cC method to aid in the diagnosis or prognosis of neoplasia; where a CC difference in the hphl gene, mRNA, or protein between a first and CC second tissues indicates neoplasia in the first tissue; (8) a method of CC to aid in detecting a genetic predisposition to neoplasia; (9) a cC method of identifying a human chromosome 12; and (10) a method of CC inducing a cell to de-differentiate by contact with a hphl gene or CC expression product. The products can also be used to inhibit hphl CC expression to suppress neoplasia, dysplasia, or hyperplastic cell CC growth. They can be used to treat e.g. tumours, anhydric hereditary CC dysplasia, endometrial, adrenal, breast, prostate, or thyroid CC dysplasia, endometrial, adrenal, breast, prostate, or thyroid CC dysplasia, endometrial, adrenal, breast, prostate, or thyroid CC down-regulation or inhibition of hphl expression can help contaction. In these disorders, decreasing hphl expression can help contaction. In these disorders, decreasing hphl expression is contacters, effecting hphl down-regulation can suppress metastases.

A method of identifying neoplastic tissue of a human comprises comparing the expression of a hph1 gene in a tissue of a human suspected of being neoplastic with the expression of a hph1 gene in a tissue of the human which is normal Under-expression of the hph1 gene identifies the subject as having neoplastic tissue. The hph1 concogene functions to suppress neoplastia and dysplastic or hyperplastic cell growth as well as to induce cellular differentiation. The cDNA, protein and vectors can be used as diagnostic and therapeutic tools for proliferative and developmental disorders and to identify a pl3 region of a human chromosome 12. They can be used for the detection, diagnosis or prognosis of neoplasia or for detecting a genetic predisposition to 341 laaspGlySerGlyGlnGlnAsnValGlyMetAsnLeuThrArgThrAla 357 324 rGlnGlySerGlnThrGluAlaGluSerAlaAlaAlaLysLysAlaGluA 341 366 TCCACAGACCCAGCTGCAGCTCCAGCAGGTGGCGCTGCAGCAGCAGCAGC 415 308 GlyThrGlyValValGlnProLeuProAlaAlaGlnThrValThrValSe 324 178 CAGAGCCTGACTGGCGGACCTGCTGCGGGAGCCGCTGGAATTGGCATGCC 316 GGGACCTCGGGGATGGCCCCTCACAGCATGGCTGTCGTGTCTACGGCAAC 365 293 lnLeuProSerSerGly.....MetGlyGlySerCysProArgLys 307 266 GCTTTGGTGCCATGGGACAGCCAATGTCTCTCTCAGGGCCAGCCGCCTCCT 315 276 oGlySerMetGlyProGlyGlyGlyGlyGlnAlaHisGlyGlyLeuGlyG 293 228 T.....CCTCGGGGCCCGGGACAGTCTCTGGGCGGGATGGGTA 265 Sequence neoplasia.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 09-MAY-2001 (first entry)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The present invention describes a method of screening for genes which modulate polyglutamine toxicity using animal models with polyglutamine sequences that cause toxicity in the animal. The model is preferably prosophila, and toxic polyglutamine sequences include the human and prosophila heat shock protein 40/HDJ1, tetratricopeptide repeat protein (TPR2) and myeloid leukaemia factor 1 (MLF) genes. The model is useful for identifying treatments for neurodegenerative and proliferative disorders, including Alzheimer's disease, Parkinson's disease,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    14-AUG-2000; 2000WO-US22496

DR (MESS/ aggregates of certain proteins, involving contacting the protein with a binding molecule known as an intrabody. Proteins to be bound include those associated with neurological disorders, and so the method can be used in the prevention of diseases such as Alzheimer's, Parkinson's and Huntington's diseases, prion disease, frontotemporal dementia, amyotrophic lateral sclerosis, spinal and bulbar muscular atrophy, dentatorubal-pallidoluysian atrophy, spinocerebellar ataxia type 1 303 GCAGCCGCCTCCTGGGACCTCGGGGATGGCCCCTCACAGC...... 343 344 TGGCTGTCGTGTCTACGGCAACTCCACAGACCCAGCTGCAGCTCCAGCAG Disclosure; Page 100; 108pp; English Parkinson's disease; prion disease; frontotemporal dementia; amyotrophic lateral sclerosis; spinal and bulbar muscular atrophy; dentatorubal-pallidoluysian atrophy; spinocerebellar ataxia type 1; SCA2; SCA3; SCA4; SCA5; SCA6; SCA7; protein accumulation; intrabody. The present invention describes a method for inhibiting the formation 21-JUL-2000; 2000US-0620955 24-JUL-2000; 2000WO-US20131.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           AAB84634 standard; Protein; 3190 AA
   The present sequence represents a CBP protein. A probe derived from the CBP protein is used to isolate a Drosophila cellular protein, designated 532. Protein 532 interacts with proteins involved in the control of cell prolliferation, in particular partners of p300/CBP
                                                                                      Disclosure; Fig 10; 147pp; French.
                                                                                                                                   New nucleic acid encoding a protein that interacts with p300/CBP and Rb proteins, useful for identifying specific interaction partners,

The cellular proteins of the invention are used for in vitro screening of compounds (including immunosuppressants) which are able to interact physically and/or functionally with them, particularly to determine sensitivity of the protein to immunosuppressants or to identify capacity to interact with Ela viral proteins. The proteins can be used to induce (or interfere with) cellular differentiation and proliferation, including formation

AAZ53015 to AAZ54536, AAZ54577 to AAZ54615, and AAY74253 to AAY75941 represent novel Neisseria meningitis and N. gonorrheae polynucleotides and polypeptides. AAZ54537 to AAZ54576 and AAZ54616 to AAZ54737 represent PCR primers used in the exemplification of the present invention. The polypeptides, the polynucleotides, antibodies and compositions of the invention can be used as vaccines, as diagnostic reagents, and as

The polypeptides can be used in the manufacture of medicaments for treating or preventing infection due to Neisserial bacteria (e.g. meningitis and septicaemia), to detect the presence of Neisseria bacteria, or to raise antibodies. They may also be used to screen for agonists or antagonists, which may themselves have use as antibacterial agents. The polynucleotides of the invention may also be used in gene therapy protocols.
                                                                                                                                                                                                                                                                                                                                                                                                                          611 TGTTGCTGATTTTGATGATGCAATTTAATTAGATGCTGCTGCTGCTGCTG 562

complementary strand of a polynucleotide which comprises a 5'-end sequence and an oligonucleotide comprising a sequence complementary to a polynucleotide which comprises a 3'-end sequence, where the oligonucleotide comprises at least 15 nucleotides and the combination of the 5'-end sequence/3'-end sequence is selected from those defined in the specification. The primer sets can be used in antisense therapy and in gene therapy. The primers are useful for synthesising polynucleotides, particularly full-length cDNAs. The primers are also useful for the detection and/or diagnosis of the abnormality of the proteins encoded by the full-length cDNAs. The primers allow obtaining of the full-length cDNAs easily without any specialised methods. AAH03166 to AAH13628 and AAH13633 to AAH18742 represent human cDNA sequences; AAB92446 to
                                                                                                                                                                                                                                                                                 to the complementary strand of a polynucleotide which comprises one of the 5602 nucleotide sequences defined in the specification, where the oligonucleotide comprises at least 15 nucleotides; or (b) a combination
                                                                                                                                                                                                                                                                                                                                          The present invention describes primer sets for synthesising 5602 full-length cDNAs defined in the specification. Where a primer set comprises: (a) an oligo-dT primer and an oligonucleotide complementary
                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Primer sets for synthesizing polynucleotides, particularly the 5602 full-length cDNAs defined in the specification, and for the detection and/or diagnosis of the abnormality of the proteins encoded by the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     11-JAN-2000;

The protein sequences, and fragments of them, are useful as immunogens and/or antigens. The nucleotide sequences can be useful as immunogens and/or antigens. The nucleotide sequences can be used in vaccines and in diagnostic assays. The proteins and nucleotides can be useful for the detection and diagnosis of S. pneumoniae. The protein sequences are also useful for screening an agent capable of antagonising, inhibiting or interfering with the function or expression of the proteins in which the agent is useful for treatment or prophylaxis of S. pneumoniae infection and meningitis. AAA05591 to AAA05614 represent primers used in the
                                                                                                                                                                                           AAY81501 to AAY81679 represent specifically claimed protein sequences isolated from Streptococcus pneumoniae. AAA05407 to AAA05590 represent specifically claimed nucleotide sequences isolated from S. pneumoniae.
                                                                                                                                                                                                                                                                                                                      or inhibiting expression of the protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Streptococcus pneumoniae

                                                                                                                                                                                                                                                                                                                                                                                                                    The present invention describes a method for inhibiting the formation of aggregates of certain proteins, involving contacting the protein with a binding molecule known as an intrabody. Proteins to be bound include those associated with neurological disorders, and so the method can be used in the prevention of diseases such as Alzheimer's, Parkinson's and Huntington's diseases, prion disease, frontotemporal dementia, amyotrophic lateral sclerosis, spinal and bulbar muscular atrophy, dentatorubal pallidoluysian atrophy, spinocerebellar ataxia type 1 (SCA1), SCA2, SCA3, SCA4, SCA5, SCA6 and SCA7.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Inhibiting intracellular polypeptide accumulation, useful for treating neurological disorders, e.g. Alzheimer's disease, comprises contacting

                                              Pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          IDENTITY_NUC
